

Case Study: Education

Restoring urinals at a large school

Overview

- Trial conducted at the school, managed by leading facilities management company.
- Multiple washrooms across a busy education campus.
- High footfall from students and staff, creating constant system pressure.

The Challenge

- Persistent urinal odours.
- Blocked urinals impacting usability.
- Historic uric scale build-up restricting pipework flow.
- Ongoing reliance on reactive maintenance and manual intervention.

The Solution

- 7-day corrective dosing programme using URIZAP Shock.
- Daily application.
- Designed to break down uric scale, organic build-up and blockages at source.
- Simple integration into existing cleaning routines, with no disruption to site operations.

The Benefits

- Blocked urinals restored to full flow within days.
- Significant reduction in odours.
- Visible breakdown of uric scale and build-up.
- Reduced need for reactive maintenance and callouts.
- Easy dosing and strong adoption by on-site cleaning teams.
- Proven performance in a live education environment.

"The product works well...I'm very impressed."
