

Case Study: Historic estate

Eliminating mould while preserving surfaces

Overview

A historically significant site in Central London was experiencing persistent mould issues on internal wall surfaces.

The facilities management team responsible for maintaining the property sought an effective and sustainable alternative to traditional cleaning methods.

The Challenge

Due to the age and unique environmental conditions of the buildings, certain internal areas were regularly affected by mould growth.

Conventional cleaning solutions were:

- Labour-intensive
- Reliant on harsh chemicals
- Only delivering short-term results

The facilities team needed a treatment that:

- Was safe and simple to apply
- Provided lasting effectiveness
- Aligned with the site's strict sustainability standards

The Solution

The facilities team successfully trialled **MOULDZAP**, an advanced mould treatment solution that eliminated mould at its root and removed all visible mould.

The Benefits

- Eliminates mould at the source
- Non-toxic, no harmful fumes or residues
- Safe for all common surface types
- Reduces time and cost associated with repeated cleaning
- Long-lasting results without damaging heritage features

About Thrive

Thrive develops innovative, science-backed biological solutions to tackle the challenges of human-made pollution.

Our groundbreaking products transform how people clean, delivering exceptional performance without compromise.

We empower businesses to resolve cleaning challenges, reduce waste, improve efficiency, stay compliant, and shrink their carbon footprint.
