

Case Study: Airport

Persistent washroom odours eliminated in just two weeks

Overview

The airport is one of the UK's leading aviation hubs, welcoming millions of passengers each year and operating in a fast-paced environment where cleanliness, hygiene and passenger experience are essential.

Working in partnership with a leading provider of integrated facilities management services, the airport ensures passenger-facing environments, including washrooms, remain clean, efficient and consistently maintained to the highest standards.

The Challenge

The men's arrivals washroom was experiencing persistent and unpleasant odours, resulting in customer complaints and creating additional pressure for the cleaning team.

Despite regular cleaning routines, the issue continued. The Facilities Management company required a solution that could:

- Eliminate the source of the odour problem
- Improve the washroom experience for passengers
- Reduce customer complaints
- Support cleaning teams in maintaining standards more efficiently

"The cleaning team were extremely impressed with how well URIZAP Shock and URIZAP performed during the trial period.

The airport were also very pleased with the results, with customer complaints reducing significantly since introducing Thrive products."

The Solution

Thrive introduced the URIZAP System, beginning with an intensive treatment of URIZAP Shock.

Following camera inspection work to identify the source of the issue, the washroom underwent a two-week URIZAP Shock treatment programme to target the organic build-up responsible for persistent odours.

Following the successful treatment period, ongoing dosing with URIZAP was introduced to maintain performance and help prevent the issue from returning.

The Results

The results were immediate and significant:

-  The odour issue was completely resolved
-  Customer complaints were vastly reduced
-  The cleaning team reported a noticeable improvement in washroom conditions
-  Ongoing URIZAP dosing has made daily cleaning routines easier and more efficient
-  Cleaning teams have been able to spend more time focusing on other priority tasks

About Thrive

Thrive believes cleaning can be smarter, safer, and better for the planet.

We develop innovative, science-backed biological solutions to tackle the challenges of human-made pollution.

Our groundbreaking products transform how people clean, delivering exceptional performance without compromise. By setting new standards in sustainability, we empower businesses to reduce waste, improve efficiency, stay compliant, and shrink their carbon footprint, all while supporting the regeneration of our planet's ecosystems.
